Research

I develop algorithms and theory for scalable, sample-efficient, and trustworthy **robot learning**.

Examples of my work include (i) multi-fidelity methods that stabilize **real-robot reinforcement learning** by combining scarce real-world data (e.g., as few as 4 rollouts per update) with abundant but imperfect simulation data, while remaining robust to simulation bias [11, 9], and (ii) learning behavior models that predict how agents act in interaction-rich, uncertain scenarios [7, 2, 1]. I ground my research in real-world systems such as robotic manipulators and mobile robots.

Education

The University of Texas at Austin, USA — Aug 2023 – May 2028 (expected)
Ph.D. in Electrical and Computer Engineering — Advisors: Ufuk Topcu and David Fridovich-Keil

Delft University of Technology, Netherlands — Sep 2021 – Jul 2023
M.Sc. in Robotics, *cum laude*; GPA 9.04/10 (top 1.6%) — Advisor: Javier Alonso-Mora

Tongji University, China — Sep 2016 – Jul 2021
B.Eng. in Automotive Engineering; exchange semester at TU Graz, Austria (2020)

*indicates equal contribution.

Selected Honors and Awards

Journal-to-Conference (J2C) Certification, TMLR ($<10\%$ of accepted papers) 2026

Cockrell School of Engineering Fellowship, UT Austin 2023 – present

Travel Grants: Texas Robotics; WAFR 2025, 2024

Graduation *cum laude*, TU Delft 2023

First Prize, Franka Emika Robot Tactile Manipulation Challenge, European Robotics Forum 2022

First Prize Academic Scholarship, Tongji University (top 3% of department) 2019

Service and Mentoring

Conference Reviewer: NeurIPS, ICLR, RLC, ICRA, IROS, CDC
Journal Reviewer: T-RO, RA-L, T-AC

Mentees: Ryan Park, UT Austin undergraduate (next: Ph.D. at UC Berkeley)
Yash Jain, UT Austin undergraduate (next: Ph.D. at UPenn)

Skills

Programming: Python, C++, Julia
Machine Learning: PyTorch, JAX
Robotics: Isaac Lab, ManiSkill, MuJoCo, ROS, Franka arm, Jackal and Husky mobile robots
Tools: Git, Linux, SLURM
Languages: English (C1), Mandarin (native), German (B2)
